COMP-NOVA

COMPRESSOR PEDAL

Congratulations on your purchase of T-REX COMP-NOVA

Comp-Nova is a compressor pedal with a perfectly simple set of controls and pure, naturally compressed sound.

It "evens out" the irregularities in your signal by lowering high-input signals while boosting low-input signals, giving you smooth sustain without degrading the clarity and dynamics of the original sound.

COMPRESSION DONE RIGHT

If you've never used a compressor before, the effect can seem complicated at first. But it only takes an hour or so of experimenting and you'll discover a world of settings that add the subtle enhancement only a compressor can provide.

Place your Comp-Nova in the beginning or in the end of the pedal chain - it's all a matter of taste. For long sustain, the compressor should be placed after the distortion pedals.

CONTROLS

The **COMP knob** determines the compression amount. The more you turn it up, the more you compress your sound.

The **ATTACK knob** controls the sensitivity - how much of the signal will be compressed. Longer Attack times mean more natural signal before the compressor starts to work.

The **LEVEL knob** sets the overall volume. At max. level the signal is boosted approximately 3dB.
