

Congratulations

on your purchase of the **DIVA DRIVE**, a premium boutique overdrive pedal from T-Rex Effects.

Built on a firm foundation of legendary JRC4558 IC gain, the **DIVA DRIVE** is quite simply the most musical, versatile overdrive pedal we have ever produced.

To take full advantage of this versatility, take some time to review this manual and get to know your **DIVA** controls. The more you experiment with it, the more your **DIVA DRIVE** will give you in return.

DIVA DRIVE controls

Your **DIVA DRIVE** comes with 4 control knobs, plus a **LOW RANGE** selection switch.

The GAIN knob is the most important control on your DIVA DRIVE. The more you turn it up, the more overdrive you get.

The MIX knob lets you mix in as much clean sound as you want, preserving your unique tone and the natural punch of a cleaner guitar sound.

The **TONE** control knob lets you tune your overdrive sound by backing off on the top end of your sound, while the **LEVEL** knob is used to set the overall output volume from your **DIVA DRIVE**.

Finally, the **LOW RANGE** selector switch on the side of the unit lets tune your **DIVA DRIVE** to different guitars by choosing which range of low frequencies are accentuated when you turn up the gain.

<u>Technical Specifications</u>

Higher than TM Ohm
Lower than 1K Ohm
Minimum 8V DC / Maximum 12,5V DC
11 mA
3Vp/p
