

USER MANUAL

**MÖLLER**

## CONGRATULATIONS

on your purchase of T-Rex Møller.  
Classic overdrive pedal with clean boost.

Møller is a classic overdrive pedal that provides a wealth of dynamic overdriven tones with superb tonal control, as well as separate transparent 0-20 db adjustable and switchable clean boost, and a unique overdrive/clean mix option.

## CONTROL YOUR MØLLER

**Møller has 5 controls: TONE, GAIN, MIX, LEVEL and BOOST.**

**TONE** adjusts a broad range of frequencies and provides great tonal control.

**GAIN** controls overall distortion.

**MIX** lets you dial in the perfect balance between distorted and non-distorted signal. Roll the mix knob back a bit, and your clean signal starts to get through, meaning that if you pick lightly, or roll back the volume on your guitar, you get a stunning clean/softly clipping sound that retains all the feel and dynamics of your original tone, only bigger, louder and richer. Rolled all the way up and with distortion maxed too, the pedal sounds just like an old tube amp on full volume.

**LEVEL** controls master volume.

**BOOST** controls the amount of boost, from 0-20 db. The boost function lets you dial in a solo level, whether the overdrive circuit is activated or not.
